

Human activities have negative effects on plants and animal species. Some people think that it is too late to do anything about this problem. Other people believe that effective measures can be taken to improve this situation. Discuss both views and

Essay:

The debate over whether there are still possible solutions to save our endangered ecosystem or if it is too late, is an ongoing one. This essay focuses on both these perspectives, while drawing attention towards the necessity of timely intervention to mitigate the consequences.

The argument, which suggests that we have crossed the point of no return, hinges on the fact that human activities such as plastic dumping and deforestation have wreaked havoc on the environment. The extensive use of plastic has led to the obliteration of countless species, and the proliferation of such materials across the globe seems like an impossible crisis to control. Deforestation and poaching activities, on the other hand, have driven multiple species to extinction, and these species cannot be restored regardless of our efforts to reverse the damage.

On the other hand, there is a conviction held by some that viable solutions exist to improve our ecosystem. Stricter laws and regulations on disposal of waste can be implemented globally to significantly reduce pollution. Reserved territories for wildlife and prohibiting development in these areas can help restore and protect our ecosystems. Although resurrecting extinct species is beyond reach, consistent diligence towards protecting our forests and wildlife can surely prevent endangered species from going extinct.

In conclusion, despite the monumental challenges we face, it appears beneficial for humanity to tirelessly attempt to salvage and protect our rapidly deteriorating ecosystem.
