

Human activities have negative effects on plants and animal species. Some people think that it is too late to do anything about this problem. Other people believe that effective measures can be taken to improve this situation. Discuss both views and

Essay:

It is undeniable that human activities are having adverse impacts on both flora and fauna. While some people feel it is too late to reverse the damage caused, others argue that it is possible to rectify the situation through effective strategies. I subscribe to the latter viewpoint.

There's no doubt that modern lifestyles and technological advancements have resulted in significant harm to our ecosystem, driving many plant and animal species on the brink of extinction. This is primarily due to the destruction of natural habitats such as forests and wildlife areas to make way for human developments. Further exacerbating the issue is the disregard of many people for the environment, choosing convenience over conservation. These actions seem selfish, but they are an unfortunate reality in our modern society.

Conversely, there is a growing community of environmentalists who believe in the possibility of rectifying these misdeeds. They advocate for the use of eco-friendly products and alternative modes of transportation like electric cars to reduce our carbon footprint. Although these endeavours might not show immediate results, I am convinced that their cumulative impact would significantly improve the health of the environment in the long run. Thus, my stance is that it is never too late to make a positive change.

In conclusion, despite the negative impact of human activities on the environment, I believe with collective and consistent efforts, reversal of the damage is possible.
