

Some people think that the best way to reduce the time spent in travelling to work is to replace parks and gardens close to the city center with apartment buildings for commuters, but others disagree. Discuss both views and give your own opinion.

Essay:

The dissension surrounding the replacement of city-center parks and gardens with high-rise apartments for employees impinges on various issues including commuting, pollution and mental health. While some promote the building of commuter accommodations, I staunchly believe that the value of green spaces supersedes short travel times.

Those supporting the development of city-center apartments have tangible reasons. Foremost, excessive commuting erodes employees' leisure hours and induces stress, potentially impacting their workplace efficacy and life quality. Also, long car trips emit pollutants, aggravating global warming and negative health impacts. Erecting commuter apartments can mitigate these concerns, letting both the employees and society reap the benefits.

I, however, stand firm that urban green spaces like parks and gardens have a paramount role in residents' lives. Not only do these oases provide a tranquil escape from daily worries and foster social bonding, but they are also quadrants of seasonal change, bolstering residents' mental health. Moreover, the growing concern over sedentary lifestyles can be alleviated in part by the exercise opportunities these spaces provide. Cycling, jogging, hiking or just a gentle stroll can promote residents' physical well-being complementing their mental health. Therefore, the retention of city-center parks is beneficial for the society.

In conclusion, regardless of benefits offered by commuter apartments, green spaces are indispensable, underscoring the significance of physical and mental well-being over commute time reduction.
