

The chart below shows information about student enrolments at three different English language schools for the year 2017. Summarise the information by selecting and reporting the main features, and make comparisons where relevant. write at least 150.

Essay:
The given table demonstrates the enrolment numbers for the year 2017 at three English language centres, namely; New Zealand Center for Language (NZCL), Mayfair School of English (MSE), and Best Communication English Academy (BCEA).

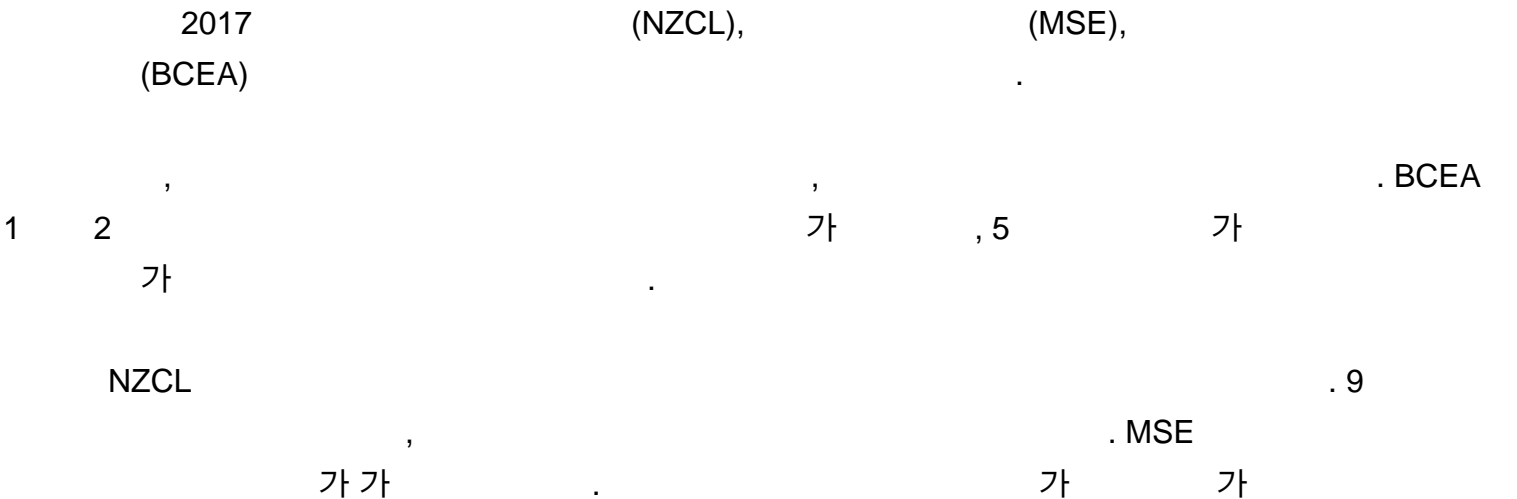

In general, there was a fluctuation in the number of students enrolled in the aforementioned schools, with each one undergoing a variety of trends throughout the year. The BCEA started the year with a high number of enrolments in January and February, marking it as the preferred choice among students. Nevertheless, their popularity witnessed a dramatic decline beginning from May, making it the least popular academy for learning English by the end of the year.

On the other hand, NZCL maintained its position as the second most appealing academy for learners early in the year. Despite experiencing a steady drop in enrolments from September, it managed to remain at the top of the popularity chart. MSE initially lagged behind the other two centres with the lowest student enrolment numbers. Although, it observed a consistent increase in student admissions throughout the year, ultimately occupying the second largest share of student enrolments by year end.

In conclusion, each language academy experienced different trends in student enrolments during 2017. Whilst some saw a drop in popularity, others witnessed an upward trend, making each institution's journey unique in its own way.
